Reducing Mortality in the Perioperative Period

Reducing Mortality in the Perioperative Period

This book describes the techniques, strategies, and drugs that have been demonstrated by well-documented randomized trials to influence survival in the perioperative setting. It takes into consideration all types of adult surgery and will be relevant to the evaluation of any patient undergoing an operative procedure. Each chapter focuses on a specific procedure, device, or drug. The scope is accordingly wide, with coverage of topics as diverse as chlorhexidine oral rinse, clonidine therapy, insulin infusion, intra-aortic balloon pump support, leukodepletion, neuraxial anesthesia, and noninvasive respiratory support, to name but a few. In addition, the risks and benefits of using a web-based consensus process (as in this book) to identify effective means of reducing perioperative mortality are discussed. The clear text is supported by "how to do" sections and "key points" boxes that provide easily accessible practical information.

Written by acknowledged international experts, *Reducing Mortality in the Perioperative Period* will be of interest for a wide variety of specialists, including surgeons, cardiologists, anesthesiologists, and intensivists.
