Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource

Stanley E. Manahan

Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource Stanley E. Manahan

Carefully crafted to provide a comprehensive overview of the chemistry of water in the environment, **Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource** examines water issues within the broad framework of sustainability, an issue of increasing importance as the demands of Earth's human population threaten to overwhelm the planet's carrying capacity. Renowned environmental author Stanley Manahan provides more than just basic coverage of the chemistry of water. He relates the science and technology of this amazing substance to areas essential to sustainability science, including environmental and green chemistry, industrial ecology, and green (sustainable) science and technology. The inclusion of a separate chapter that comprehensively covers energy, including renewable and emerging sources, sets this book apart.

Manahan explains how the hydrosphere relates to the geosphere, atmosphere, biosphere, and anthrosphere. His approach views Planet Earth as consisting of these five mutually interacting spheres. He covers biogeochemical cycles and the essential role of water in these basic cycles of materials. He also defines environmental chemistry and green chemistry, emphasizing water's role in the practice of each. Manahan highlights the role of the anthrosphere, that part of the environment constructed and operated by humans. He underscores its overwhelming influence on the environment and its pervasive effects on the hydrosphere. He also covers the essential role that water plays in the sustainable operation of the anthrosphere and how it can be maintained in a manner that will enable it to operate in harmony with the environment for generations to come.

Written at an intermediate level, this is an appropriate text for the study of current affairs in environmental chemistry. It provides a review and grounding in basic and organic chemistry for those students who need it and also fills a niche for an aquatic chemistry book that relates the hydrosphere to the four other environmental spheres.

From reader reviews:

Roberta Petty:

This Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource book is absolutely not ordinary book, you have after that it the world is in your hands. The benefit you will get by reading this book is actually information inside this guide incredible fresh, you will get info which is getting deeper anyone read a lot of information you will get. That Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource without we know teach the one who looking at it become critical in contemplating and analyzing. Don't become worry Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource can bring if you are and not make your bag space or bookshelves' become full because you can have it within your lovely laptop even telephone. This Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource having great arrangement in word along with layout, so you will not feel uninterested in reading.

Frank Craver:

As people who live in the particular modest era should be upgrade about what going on or information even knowledge to make these keep up with the era that is always change and advance. Some of you maybe may update themselves by looking at books. It is a good choice for you but the problems coming to anyone is you don't know what kind you should start with. This Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource is our recommendation to make you keep up with the world. Why, because book serves what you want and want in this era.

Harold Sparkman:

This book untitled Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource to be one of several books in which best seller in this year, honestly, that is because when you read this e-book you can get a lot of benefit onto it. You will easily to buy this kind of book in the book retail outlet or you can order it by way of online. The publisher in this book sells the e-book too. It makes you quickly to read this book, as you can read this book in your Touch screen phone. So there is no reason to your account to past this guide from your list.

Harold Cole:

What is your hobby? Have you heard that question when you got students? We believe that that concern was given by teacher with their students. Many kinds of hobby, All people has different hobby. Therefore you know that little person such as reading or as reading become their hobby. You have to know that reading is very important in addition to book as to be the issue. Book is important thing to incorporate you knowledge, except your personal teacher or lecturer. You see good news or update regarding something by book. A substantial number of sorts of books that can you take to be your object. One of them is this Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource.
