Global Contamination Trends of Persistent Organic Chemicals

Global Contamination Trends of Persistent Organic Chemicals

Environmental pollution by man-made persistent organic chemicals (POCs) has been a serious global issue for over half a century. POCs are prevalent in air, water, soil, and organisms including wildlife and humans throughout the world. They do not degrade and cause long-term effect in organisms. Exposure to certain POCs may result in serious environmental and health effects including birth defects, diminished intelligence and certain types of cancers. Therefore, POCs have been the subject of an intensive regional, national and international effort to limit their production, use, and disposal of these chemical stocks. Trend monitoring studies are essential to make clear the behavior and fate of these compounds and to protect our environment and living resources.

Global Contamination Trends of Persistent Organic Chemicals provides comprehensive coverage of spatial and temporal trends of classical and emerging contaminants in aquatic, terrestrial, and marine ecosystems, including the Arctic and Antarctic ecosystems. Compiled by an international group of experts, this volume covers:

- Spatial and temporal trends of polychlorinated biphenyls (PCBs), chlorinated pesticides, polychlorinated naphthalenes (PCNs), polychlorinated dibenzo-p-dioxins/furans (PCDD/DFs), polybrominated diphenyl ethers (PBDEs), hexabromocyclododecanes (HBCDs), perfluorinated compounds (PFCs), synthetic musks, polynuclear aromatic hydrocarbons (PAHs), and octyl- and nonylphenols
- Environmental and biological matrices used for the trend studies were atmosphere, water, soil, sediment, bivalve mollusks, fish, marine mammals, terrestrial mammals, and human breast milk
- Spatial and temporal trend studies presented from Australia, Brazil, China, Estonia, Ghana, Hong Kong, India, Italy, Japan, Korea, Norway, Poland, Sweden, the United States, coastal and open ocean environments, and the Arctic and Antarctic regions

POCs have been the subject of an intensive regional, national, and international effort to limit their production and use, and to mitigate the disposal of these chemicals. Since POCs are prevalent in air, water, soil, and tissues of organisms (including wildlife and humans) throughout the world and do not degrade, they cause long-term effects in organisms. Trend monitoring studies are essential to make clear the behavior and fate of these compounds and to protect our environment and living resources. Relevant to professionals and students alike, **Global Contamination Trends of Persistent Organic Chemicals** facilitates the understanding of environmental and biological behavior of these chemicals and the development of strategies for protecting the global environment for future generations.

From reader reviews:

Robert Johnson:

With other case, little folks like to read book Global Contamination Trends of Persistent Organic Chemicals. You can choose the best book if you want reading a book. Provided that we know about how is important any book Global Contamination Trends of Persistent Organic Chemicals. You can add knowledge and of course you can around the world by just a book. Absolutely right, mainly because from book you can recognize everything! From your country until foreign or abroad you may be known. About simple point until wonderful thing you could know that. In this era, we can easily open a book or searching by internet system. It is called e-book. You can use it when you feel fed up to go to the library. Let's go through.

Jacqueline Harding:

As people who live in the actual modest era should be change about what going on or information even knowledge to make them keep up with the era and that is always change and make progress. Some of you maybe may update themselves by reading through books. It is a good choice for you but the problems coming to anyone is you don't know what kind you should start with. This Global Contamination Trends of Persistent Organic Chemicals is our recommendation so you keep up with the world. Why, since this book serves what you want and want in this era.

Robert Holt:

Within this era which is the greater man or who has ability to do something more are more treasured than other. Do you want to become certainly one of it? It is just simple way to have that. What you are related is just spending your time little but quite enough to possess a look at some books. One of several books in the top checklist in your reading list is Global Contamination Trends of Persistent Organic Chemicals. This book and that is qualified as The Hungry Slopes can get you closer in getting precious person. By looking upward and review this publication you can get many advantages.

Stacie Logan:

As a student exactly feel bored to reading. If their teacher expected them to go to the library in order to make summary for some publication, they are complained. Just tiny students that has reading's spirit or real their passion. They just do what the educator want, like asked to the library. They go to at this time there but nothing reading critically. Any students feel that reading through is not important, boring in addition to can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore , this Global Contamination Trends of Persistent Organic Chemicals can make you feel more interested to read.
